CUPOWER

BORN TO BE LIGHT.

CRA & RED compliance

readiness statement

www.cupower.com

1. Implementation of the Cybersecurity requirements under the CRA and RED

Status and planned implementation steps for 2026

The upcoming Cybersecurity regulatory requirements under the Cyber Resilience Act (CRA) and the RED Cybersecurity requirements place new demands on manufacturers of connected products.

For CUPOWER, quality, product safety, and compliance with legal requirements are fundamental components of a sustainable product and corporate strategy. For this reason, we begin working on the implementation of the necessary organizational and technical measures at an early stage and in a structured manner.

The current focus is on the initial regulatory requirements, which will take effect in September 2026. These requirements specifically address processes for addressing vulnerabilities, incident reporting procedures, and organizational cybersecurity structures.

2. Current status of implementation

The key elements for the first implementation phase are already being developed. These include, in particular,

- Establishment of a Product Security Incident Response Teams (PSIRT)
- Implementation of a structured vulnerability management process
- Identification of customer contact points for reporting cybersecurity issues
- Coordination with platform and ecosystem partners
- Preparation of the required regulatory documentation and supporting evidence

Internal responsibilities and implementation schedules have been defined.

3. Planned availability of processes and content

Planned content / processes	Target date
PSIRT organization and internal processes	June 2026
Customer contact points for vulnerability reporting	June 2026
Vulnerability Disclosure Policy	July 2026
Coordination with ecosystem partners	August 2026
Vulnerability management prozess	August 2026
Compliance and test documentation	September 2026

All implementation activities are carried out in accordance with the current regulatory and normative framework. New or updated requirements from harmonized standards and technical specifications are continuously taken into account.

4. Regulatory outlook

The current implementation is based on the regulatory requirements currently in effect and ongoing standardization efforts. Since some of the supporting standards and technical specifications are still under development, the implementation measures are continuously being adapted to new regulatory publications.

Following the initial implementation phase in September 2026, additional CRA requirements will take effect by the end of 2027. The necessary additional measures are already being addressed as part of the long-term product and compliance strategy.
